Draft of DUNGARPUR DISTRICT SURVEY REPORT

SECRETARIAT OF DISTRICT LEVEL ENVIRONMENT IMPACT ASSESSMENT
 AUTHORITY DUNGARPUR, RAJASTHAN
 Collectorate Dungarpur-314001 Ph.: 02964-231002; E-mail- dm-dun-rj@nic.in

CONTENT

1. Introduction
2. Overview of Mining Activity in the District
3. List of Mining Leases in the District with location, area, and period of validity
4. Details of Royalty or Revenue received in last three years
5. Details of production of minerals in last three years
6. Process of deposition of sediments in the river of the district
7. General profile of the district
8. Land utilization pattern in the district: Forest, Agriculture, Horticulture, Mining etc.
9. Physiography of the district
10. Rainfall and Climate
11. Geology and Mineral Wealth

Dungarpur	No of Leases	1	22	67	8		11	0		109
	Area in Hect	5.0000	576.8761	81.6675	8.0000		1.7500	0		673.2936
Simalwara	No of Leases		1	10				0		11
	Area in Hect		4.9900	13.9829				0		18.9729
Jhothri	No of Leases			23				0		23
	Area in Hect			29.8880				0		29.8880
Sagwara	No of Leases	1			2		1	0	2	6
	Area in Hect	4.9500			2.2800		0.1800	0	1.8000	9.2100
Bichhiwara	No of Leases		2		2			0		4
	Area in Hect		29.7200		2.0000			0		31.7200
Galiyakot	No of Leases							0		0
	Area in Hect							0		0.0000
Chikhli	No of Leases			1				0		1
	Area in Hect			1.8700				0		1.8700
Aspur	No of Leases					14	2	0		16
	Area in Hect					14.0	0.36	0		14.3600
sabla	No of Leases		5			5		0		10
	Area in Hect		482.035			5		0		487.0350
Total Jurisdiction	No of Leases	2	30	101	12	19	14	0	2	180
	Area in Hect	9.9500	1093.6211	127.4084	12.2800	19.00	1.9300	0	1.8000	1265.19

3. The list of mining leases in the district with location, area and period of validity-

S. NO	Lease No	Lessee name	Mineral	Lease Period From	Lease Period To	Near Village	Tehsil	Acea in Hector
1	ML/40A/1989	Abhiyant Singh Skhwat	Marble	19.03.1991	18.03.2021	Padla Jani	Aspur	1.0000

6. Process of deposition of sediments in the rivers of the district

By the process of Attrition and erosion of encountered rock types from the river originating mountain range through river channel track. As it attains plainy pleatue area, the water flow speed deemed to reduce the transporting capacity of bearing load cobbles bolders pebbles and sand. Gradually the converting the attired sand collecting on the bank column of the river channels throughout its cores. The area is drained by a network of streams that discharge their water into the Som & Mahi , the two major rivers of the district. The Som river runs from west of Aspur, Som-Kamla-Amba Dam where as Mahi river runs from Banswara, Mahi Dam, both the rivers confluence at Baneshwar location.

7. General profile of the district

The district Dungarpur is named after “the town of hillocks” and the capital of the former princely state of Dungarpur. It is located in the southern part of Rajasthan. The town of Dungarpur itself is said to have been a Bhil *Pal* or a hamlet of *Dungaria*, a Bhil Chieftain whom Rawal Veer Singh Dev caused to be assassinated in the fourteenth century. Whatever may be the legend about the beginning of the settlements in the district, there is

no doubt that it formed the part of the territory known in history as *Bagar* or *Vagad* with *Vatpadrak*, present *Baroda* (a village in Aspur tehsil) as its old capital. Dungarpur district is divided into 5 sub-divisions, which are further divided into 9 tehsils. 5 Sub-division consists Dungarpur, Bichhiwara, Simalwara, Aspur and Sagwara; while 9 tehsils consist of Dungarpur, Bichhiwara, Simalwara, Chikhli, Jhaunthri, Sagwara, Aspur and Sabla.

The district consists 4 Vidhan Sabha constituencies, Dungarpur, Chorasi, Sagwara and Aspur. The Vidhan Sabha constituencies from Dungarpur district are the part of the Lok Sabha constituency of the Banswara-Dungarpur.^[2]

In 2011, Dungarpur had population of 1,388,552 of which male and female were 696,532 and 692,020 respectively. In 2001 census, Dungarpur had a population of 1,107,643 of which males were 547,791 and remaining 559,852 were females. Dungarpur District population constituted 2.03 percent of total Maharashtra population. In 2001 census, this figure for Dungarpur District was at 1.96 percent of Maharashtra population.

There was change of 25.36 percent in the population compared to population as per 2001. In the previous census of India 2001, Dungarpur District recorded increase of 22.46 percent to its population compared to 1991.

8. Land utilization pattern in the district.. Forest, agriculture, horticulture, Mining act, etc.

The total geographic area, forests comprise of about 16 per cent in the years under consideration. These data refer to area under the forest department rather than on the standing forest- in fact, field observations suggested that the forest here is really thorny shrub and undergrowth in most areas (particularly the north), though there are some lush patches in the centre-south. Land under trees, shrubs, undergrowth or that used for grazing was only about 0.5 per cent (tiny it may be, yet it has been reducing over time). Uncultivable waste is large (about 26 per cent)- as stated earlier, large terrain here is hilly and undulating. There has been a miniscule reduction in this area over these ten years under consideration: it is possible that there has been some small effort from time to time, to reclaim part of this waste land. The cultivable wasteland is a small area, at six per cent of the total geographic area. Over the years 1996-97 to 2005-06, there has been virtually no recovery of cultivable wasteland.

9. Physiography of the district.

A major part of the district is characterized by a rugged terrain. The north East-South trending aravalli hill ranges are dominant in the western part. The ground elevation of the area is about 320 mts while the hills rise upto 552 mts above MSL. The area is drained by a network of streams that discharge their water into the Som & Mahi, the two major rivers of the district.

The Udaipur-Ahmedabad meter gauge railway line of western railway passes through the district with Dungarpur and Rikhabdev road as main stations. The Delhi-Ahmedabad NH-8 also passes through western part of the district. It is also connected by state road to Banswara.

10. Rainfall month wise

The annual rainfall varies extensively over the district from up to 880 mm in Dungarpur town in the northwest to under 500 mm at Nithawa in the northeast. But the rainfall is

quite variable from year to year, as Nithawa had 805 mm in 2013 but only **465 mm** in 2014.

Runoff Water Potential by Panchayat Samiti

Panchayat Samiti Average run off as per cent of the rain fall

Dungarpur 28.0

Aaspur 30.0

Sagwara 29.0

Simalwara 31.0

Bichiwara 26.5

Average runoff per cent of the district 30.2

Average runoff coefficient for the district 0.3

Source: Department of Water Resources, GoR.

Average annual rainfall of 729 mm spread over the district's geographical area (3,770 Km²) can pour about 26,290 million cubic feet (mcft) of rainwater. Out of this, the usable run-off is estimated at 21,032 mcft (or 80 per cent). Of this, 14,000 mcft (approximately) is presently being harvested by irrigation reservoirs, percolation tanks, *anicut*s, etc. There is, thus, a potential for harvesting another 7,032 mcft of water from the run off in a normal rainfall year.

11. Geology and mineral wealth.

The geological antiquity of the district belongs to pre-Aravalli group of rocks represented by schists, gneisses and granites, Quartzite and slates. These outcrops lying largely in the west. Gneisses rocks occur in between Hathai and Mandev and along the Mahi river for 10 kms southward from padaradi to east of Nayagaon and are associate with diorites and traps. Slates are in abundance in the central region and are largely, interstratified with veins of Quartz (North of Dungarpur town) pegmatite and granite intrusions are also seen in the states. The chief rock types of the area phyllite and quartzite striking NNW and SSE intruded by ultrabasic intrusive. The phyllite, Quartzite, Schist and dolomite belongs to Aravalli supergroup which has been subdivided into the lower Udaipur group and the upper Jhadol group. The Quartz occupies the top position. The ultrabasic are represented by talc, tremolite actinolite schist, chlorite schist and serpentine rocks which are sources of famous green marble. The crystalline limestone/dolomite in the north-eastern part can be used as marble as well as cement manufacture.

MINERAL RESOURCE:

Dungarpur has a rich assemblage of minerals. The important one are soapstone, fluorite, green marble, basemetal etc.

BASE METALS:

Occurrences of copper are found near padar-ki-pal, Amjera, Dewal, Methali. Odenetc. The state department of mines & Geology carried out detailed investigation at padar-ki-pal estimating about 1 million tonne reserves of copper. Small occurrences were seen at other places.

FLUORITE:

The largest fluorite deposits in the state are located in Mandoli-pal, areas in this district. Other important localities are Kahila Remore, Mata Bhagat, Rahatwali Thurwali, Umeria, Singhwali and Nawagaon. State department carried out the prospecting in the serves in Mandoli-pal and 2.5 Lacks tones in Kahila area. The deposit is being mined by Rajasthan State Mineral Development Corporation. Fluorite is used as flux in metallurgy of iron and aluminum. Acid grade fluorite is used manufacture of Hydro-Fluoric acid which is subsequently used in glass and chemical industries.

SOAPSTONE:

There are four important soapstone belts in the district. Soapstone occurs in pockets and lenses associated with ultra basic rocks and also associated with the dolomitic limestone. The important localities are Dewal, Jakol, Thana, Rohanwara, Pipoloda. Sabli MUnger, Padar, Amjera, Parsola, Bharkubdi Sarkan, Surata-ki-pal, Devpur-i-I, Devpur-II, Patanpura Solaj etc. It is used in cosmetics, refractories, paper & paint, pesticide and insecticide industries.

ASBESTOS:

Crysotile variety of Asbestos is found sporadically near Dewal, Jadol, Gokulpura etc. Villages associated with ultra basic rocks. Tremilite variety is also form fairly workable deposits.

MARBLE:

Serpentine rocks are being mined as green marble near Dewal, Surata, Dachki, Hirata, Simalwara, PadlaJani, Jaspur Bhatolan Ka etc. Villages. The marble takes good polish and has good market.

LIMESTONE:

Crystalline pink-grey-white limestone belonging to Aravali Super Group Occurs in two belts in Dugarpur district near Sabla, Mungar, Harwar etc. villages. Near Sabla lime stone belt runs for a strike length about 17-18 Kms from Rama in north to Bhatole in south. The width varies from 100 to 1000 mts. Limestone of this belt is crystalline, pink and off white in colour. preliminary investigations carried out by the department in part of area indicated about 15 million tonnes reserve containing 40 to 50% CaO, 2 to 4% MgO, and 8 to 18% SiO₂ The limestone takes good polish and can be used as marble. Another limestone band of about 1 Km length and 50 to 100mts. width occurs near Harwar, Nithuwa villages. It is off white to grey in colour containing 48 to 50 CaO, 5 to 10% SiO₂ and less than 2% MgO. It is also being used as marble.

BUILDING STONE:

There are large Occurrences of slates and phyllites which are being mined at places for use as building stone. Phyllites are excavated near Rampura, Denandi, Baramagra etc.

The State department of mines & Geology has been carrying out mineral survey programmes in the district regularly. Notable findings are deposits of base metal and fluorite besides small occurrences of kyanite, magnesite soapstone and etc.

The district is a major producer of soapstone and serpentine marble. The details of the productions and revenue are given in the table.

Drainage system with description of main rivers

S. No.	Name of the River	Area drained (Sq. Km)	% Area drained in the District
